<b>Key:</b>		If no color or symbol in a cross-block, then it may be used as a pollinator.
	S	Most asian pears are somewhat self-fertile, but will do better if pollinated with another variety.
	R	Often recommended as one of the better pollinators for that variety.
	B	Bartlett pear is often recommended as a good european pear pollinator for almost all varieties.
	X	Red, dark color or X indicates it should not be used as a pollinator for those varieties.
